RESTRICTION INTO GROUPS

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 3-8, 10-12, 14-16, and 19, drawn to compounds and methods of use of compound wherein the Φ = phenyl, naphthyl, thienyl, or pyridinyl and Z = nitrogen, classified in class 544, subclass 224+.
 - II. Claims 1, 5-8, 12, and 16, drawn to compounds and methods of use of compound wherein Φ = thienyl or pyridinyl and Z = carbon, classified in class 546, subclass 1+.
 - III. Claims 1, 2, 5-9, 12, 13, 16, and 17, drawn to compounds and methods of use of compound wherein Φ = phenyl or naphthyl and Z = carbon, classified in class 540, subclass 1+.

Note: Claims appearing in more than one group will be examined only to the extent that they read on the elected group.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are directed to patentably distinct inventions comprising compounds which do not share a common core. Thus, references which would anticipate or render obvious one invention would neither anticipate nor render

Art Unit: 1616

obvious the other groups. Furthermore, it should be noted that a separate search of the prior art is necessary for each group.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

ELECTION OF SPECIES

4. Claims 1-19 are generic to a plurality of disclosed patentably distinct species comprising compounds of Formula I. In particular, Formula I comprises the variables X, Y, Φ , A, R, R1, R2, and Z which depending upon the value assigned to the variables results in structurally different species as set forth above. Applicant is respectfully requested under 35 U.S.C. 121 to elect a single disclosed species for search purposes, even though this requirement is traversed.

Note: *The Examiner respectfully requests that the Applicant assign each variable the appropriate value when electing a species (i.e., X = hydrogen; Z = nitrogen; Y = -CH₃; etc.) and state which claims are drawn to the elected species.*

5. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1616

the prior art, the evidence or admission may be used in a rejection under 35

U.S.C. 103(a) of the other invention.

6. Due to the complexity of the restriction requirement, a telephone call was not made to request an oral election to the above restriction requirement.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
